## About me

I enjoy developing useful tools that enhance people's lives. I don't just make screens, I write code most of the time. I'm a big fan of technologies, especially the web and AI. Since 2013, I've developed a diverse range of websites and tools, from calculators for fixed gear ratios to Figma plugins with AI integrations, and from web pages to 3D data visualizations utilizing React and Three.js

## Experience (10 years)

2019 - PRESENT

### UI/UX Designer & Front-end developer at Trinetix

- Developed a Design System library based on React.
- Provided rapid prototypes for user testing, facilitating an iterative design process.
- Assisted designers in bridging communication with developers
- Created tools to streamline the design process and enhance designers' productivity.

2019

### Software engineer at BN Digital

- Developed various projects using modern web technologies and frameworks such as React, Vue.js, Node.js, and WordPress.

2017 - 2019

### UI/UX Designer at Trinetix

- Designed complex interfaces for enterprise systems, focusing on usability and aesthetic appeal.

2013 - 2017

### Web designer & Front-end developer at freelance

- Start of my way in web development and design creating and developing websites for various companies and friends in my local town.
